

ABSTRACT

An interlabial pad is provided that can be easily fixed to the interlabial space. A wrapping body is provided having a wrapping container that contains the interlabial pad. Also provided is an independent wrapping body. In the interlabial pad, a finger insertion opening is formed along the longitudinal direction of a back side sheet between a mini sheet piece and the side opposite to body on the back side sheet. An opening of the finger insertion opening for inserting a finger leads to a finger insertion restriction portion to restrict the insertion of the finger.
